

Connected Communication.

RTX Multicell and NewVoice Messaging – Seamlessly Integrated.

Reading Time: 5 min

In today's fast-moving business environments, every second counts – especially when safety, availability, or operational continuity is on the line. Reliable communication during critical moments requires more than just good tools; it demands a solid technical foundation and a smart, scalable solution. That's where RTX and NewVoice International come in. Together, we deliver a powerful combination of robust hardware and flexible messaging and alerting technology.

What makes our solution stand out?

RTX's solutions are used globally by brands such as **NEC, Snom, Alcatel Lucent Enterprise**, and others under their own labels – all of which are compatible with **MobiCall** thanks to our long-standing and direct collaboration with **RTX**. This allows for high flexibility in buildings and expanding your communication infrastructure without limitations.

Two experts. One goal:

Making communication simple and secure.

RTX is a global technology company **with 30+ years** of experience and knowledge in the design and development of wireless communication solutions within **Enterprise, Healthcare and ProAudio**. RTX has successfully finalized more **than 1.000 wireless projects**, ODM or OEM solutions in collaboration with global technology brands from initial design, development, testing, and production.

As one of the leading **SIP-DECT manufacturers and 2G4 design** houses in the world, RTX has extensive knowledge in wireless technologies and DECT infrastructures – a core component in many mission-critical communication systems across industries like manufacturing, healthcare,

and education.

Thanks to a close and ongoing collaboration at both technical and product management levels, **RTX and NewVoice** have worked hand-in-hand to develop standardized interfaces and pioneering solutions. This partnership has set industry standards in areas such as **beacon positioning** and **mini messaging** – creating a mutually supportive and future-oriented relationship.

Through this strategic partnership, we've developed a standardized interface that connects **RTX devices seamlessly to MobiCall**, our intelligent communication platform – regardless of your existing telecom setup.

“

Together, we create communication that connects – with reliable hardware and intelligent software, perfectly integrated for every situation

”

The result: Reliable communication, clear structures, and user-friendly operation..

One system. Countless use cases.

The combination of **RTX's products**, and MobiCall unlocks a wide range of practical applications that bring real value to everyday operations:

- **One-touch alerts** – triggered via phones, sensors, or automated events
- **Voice announcements and warnings** – delivered to mobile or stationary devices
- **Real-time people tracking** – ideal for evacuation or emergency coordination
- **Text and voice messages** – sent to specific groups or zones
- **Seamless integration** – into existing telecom environments, without replacing your current systems

the right people, at the right time, wherever they are in your facility.

Enhanced Safety through Localization

RTX devices support precise **indoor positioning**, allowing you to locate staff or visitors instantly – a key benefit for effective emergency response.

Broad Compatibility for Total Flexibility

Thanks to our standardized interface and direct cooperation with RTX, MobiCall works effortlessly with systems from:

- Mitel
- NEC
- Snom
- Alcatel Lucent Enterprise
- and many more...

Modular and Scalable by Design

From small sites to global enterprises, the solution adapts to your needs.

New devices and locations can be integrated without disruption.

quickly and

The best part?

Everything is managed through one central interface – making the solution easy to use and minimizing training and administrative overhead.

Technology that delivers real advantages

Targeted Messaging with MobiCall

Whether it's text, voice, or visual signals – **MobiCall** ensures that messages reach

Unified, not isolated

What sets the **RTX and NewVoice** partnership apart? We combine **hardware reliability with software agility**, creating a communication system that fits seamlessly into your environment.

No matter what your infrastructure looks like today, our solution gives you the tools **to communicate smarter, act faster, and stay ahead – with confidence, clarity, and security.**

About Us:

NewVoice is a global leader in alerting, process, and crisis management. Our innovative solutions and automated processes protect lives and infrastructure while seamlessly integrating into existing systems. With modular applications and cutting-edge technology, we empower companies and institutions to build an efficient and secure future.

Our values:

Responsibility, innovation, and solution-oriented collaboration – shaping the future together.
